Innovate with Intent:
Build Your Perfect AI Partner with Microsoft Copilot Studio

Boost customer and employee experiences through your own powerful copilots with Microsoft Copilot Studio and Exigo Tech

Overview of Copilot Studio: Unlock AI Revolution

Microsoft Copilot Studio is a comprehensive conversational AI solution that enables organisations to create, customise, and deploy copilots seamlessly. With its advanced customisation capabilities, generative AI features, and robust governance controls, Copilot Studio is set to revolutionise the way businesses engage with their customers and employees. It is a platform that empowers organisations to create AI-powered assistants that can handle a variety of tasks, from answering simple questions to resolving complex issues. Leveraging leading technologies, Copilot Studio delivers a seamlessly connected platform that integrates with Azure AI Studio and other tools.

What Can Copilot Studio Do?

Customise Copilot for Microsoft 365
Build, test, and publish custom plugins and GPT models to customise the copilot experience within the Microsoft 365 environment, making the copilot a trusted companion for daily tasks.

Build Your Way
Go beyond Microsoft 365. Design your own copilot models from scratch, tailored to specific applications or workflows to automate complex processes and deliver personalised experiences.

Harness the Power of Data
Seamlessly integrate copilot with multiple business applications using over 1,000 prebuilt connectors to enhance its capabilities.

Generate Conversions and Take Action
Elevate copilot capabilities by directing it to sources like websites or internal knowledge bases and turn conversations on these sources into actionable insights.
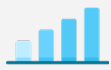

Workflow Automation
Utilise Copilot Studio to automate tasks such as expense submissions, benefit updates, and more to navigate complex business processes.

Benefits are Endless

Enhanced Productivity
Boost productivity by streamlining workflows, automating complex tasks, eliminating guesswork, and focusing on strategic work.

Data-powered Decisions:
Leverage extracted insights and real-time data analysis to make informed choices, navigate complex challenges, and optimise strategic direction.

Personalised Experience
Deliver tailored assistance, enhance user engagement, and customise responses for unique scenarios to boost customer and employee satisfaction scenario.

Security and Governance
Manage access, data, and user controls with comprehensive control and visibility. Control your copilots with secured and compliant operations.

Common Use Case

- Address general queries of employees about various aspects of the business.
- Get advanced assistance in sales inquiries and support issues.
- Build AI-powered marketing campaigns and customer interactions.
- Deliver information on business opening hours and store details.
- Handle HR-related queries regarding employee health benefits and vacation information.
